

## THIN BOILING STARCH

A modified starch produces from corn by synthesis under specific process conditions & parameters. It has low to medium and uniform viscosity, which does not change much with temperature unlike native starch, which shows wide variation in viscosity. This quality makes Thin Boiling starch ideal for denim yarn and it also has very good adhesion for cotton fiber which helps in giving proper coating on denim yarn.

### Applications:

- ❖ Fabric manufacturing
- ❖ Gypsum board manufacturing

### Functional properties:

- ❖ Lower viscosity makes it ideal for sizing of Yarn
- ❖ Easier dispersion into water
- ❖ Highly strengthening the yarn
- ❖ Provides a smoother surface for cloth.

### Packing and Storage:

- ❖ 25kg/50kg Paper/HDPE Bags & It's Equivalent.
- ❖ Keep product away from water, Humidity & High temperature to avoid absorption.
